### Abstract of **FR2661323**

Removable sleeve for carrying an item of luggage with straps.

An outer wall 11 delimits a substantially cylindrical volume. A longitudinal partition 12 carried by the wall 11 separates the volume into two housings 13, 13' which are substantially equal, each intended to receive one strap of the item of luggage. An elongate cap 15 ensures partial closing-off of the volume.
